The Sans-Culottes Series...

Compilation 2, of the new Wahttehhog Series, will soon be released.

This first episode has been in the making for a few long months now, and I must say that I am very proud of what we have been slapping together in the filming and editing of this first *real* episode. The storyline is (and hopefully will remain) unbelievably enchanting, thanks to Ryan's creative right-sided brain. And the general cinematography of the video will surely please the eyes of the noobs camping out on HBO *all day long*. The entire project is going to weigh in at around 27.81GB yet the actual exported video will probably be only 50MB large and 15+ minutes long.

IN OTHER NEWS

The first episode of the Sans-Culottes series will be titled “**Ancien Regime**”, due to Austin Arroco's thoughtfulness.

Yes, it is true that Hawaii is full of fat people (no offense to those native to Hawaii). But... my friend Montana (yes, that is his **real** name) recently visited Hawaii for a

business trip with his Dad, and he said that he lived on one of the islands that was liek all-teh most retarded and stuff. He told me that the top half of the island was full of rich fat people and the bottom half was filled with dirt-poor, still fat people. I'm making no reference to anyone, so don't sue me here. But if you decide to visit Hawaii, you've been warned... They're all Asian too.

Recent Discoveries

I've noticed that this whole Pre-Engineering Academy is really helping me in my progress in designing the ultimate “95CS” HaloCE multiplayer map (which might be eventually ported over to the Halo for Xbox). This first year, I've been advancing my 3D modeling skills so greatly that I feel that I can confidently say that this map will be the greatest custom Halo map **EVER**. Period.

I've delved into the world of tractor racing recently and pulled out the 'ol Craftsman rig to soup up. I got it running after replacing the fuse and battery, and sanding down the clips. I think the engine gaskets need replacing 'cause the oil burns. I'm going to make it direct drive too, so it'll do 40+MPH and wheelie.
